Project Title: Hospital Management System

Author: Abdulhaq === USER REQUIREMENTS START ===

The system shall allow patients to schedule appointments, view their medical records, and communicate with healthcare providers. It shall support doctors in managing patient information, scheduling appointments, and accessing patient records. The system shall ensure data privacy and security, manage staff schedules, and provide reports on patient visits and treatments. It shall also support multiple departments and specialties, and integrate with external systems for lab results and imaging. Project Title: Online Ticket Booking System

Author: Abdulhaq === USER REQUIREMENTS START ===

Users can book tickets, choose seats, and pay online. They can also cancel or modify bookings. The system shall provide real-time seat availability, process payments securely, and issue e-tickets. It shall support different payment methods and handle last-minute bookings. The system must ensure data integrity and provide customer support. Project Title: Hospital Management System

Author: Abdulhaq === USER REQUIREMENTS START ===

Users can register, log in, and access personal health records. They can schedule appointments, view test results, and communicate with healthcare providers. Doctors can manage patient records, schedule appointments, and view test results. The system shall ensure data privacy and security, manage staff schedules, and provide reports on patient visits and treatments. It shall also support multiple departments and specialties, and integrate with external systems for lab results and imaging. Project Title: Hospital Management System
