FR-01 - Land Profile Registration

Primary Actor: Farmer

Stakeholders: Field Officers, Administrators

Preconditions: Farmer has basic knowledge of their land's characteristics.

Main Success Scenario:

1. Farmer opens the app and navigates to the land profile registration page.
2. Farmer fills out the form with required fields including geographic coordinates, size, type, and previous crop history.
3. Farmer reviews the submitted information and confirms submission.
4. System validates the entered data and provides feedback on any discrepancies.
5. If valid, confirmation message is displayed; otherwise, corrections are suggested.

Extensions:

- If invalid data is detected, the system prompts the farmer to correct the information before resubmitting.

Postcondition: Land profile is registered successfully or corrected appropriately.

FR-02 - Crop Cycle Management

Primary Actor: Farmer

Stakeholders: Field Officers, Administrators

Preconditions: Farmer has already registered their land profile and knows which crops they plan to grow.

Main Success Scenario:

1. Farmer accesses the crop cycle management feature.
2. Farmer selects the desired crop and sets the start date for planting.
3. System automatically populates subsequent stages based on typical timelines.
4. Farmer adjusts dates as needed and saves the updated schedule.
5. Calendar view displays the revised timeline visually.

Extensions:

- If incorrect dates are set, the system highlights potential issues and suggests adjustments.

Postcondition: Updated crop cycle plan is saved and visible in the calendar view.

FR-03 - Localized Advisory Generation

Primary Actor: Farmer

Stakeholders: Field Officers, Administrators

Preconditions: Farmer has reported current conditions and requested assistance.

Main Success Scenario:

1. Farmer initiates the request for localized advisory.
2. System gathers relevant data points such as recent weather forecasts and soil test results.
3. Based on gathered data, the system generates a detailed advisory report.
4. Farmer receives the advisory via email or push notification.
5. Farmer reviews the report and implements recommended actions.

Postcondition: Farmer receives customized advisory tailored to their specific circumstances.

Trace to FR Id: FR-03

FR-04 - Field Officer Visit Logs

Primary Actor: Field Officer

Stakeholders: Farmers, Administrators

Preconditions: Field officer has completed a visit to a farm and wishes to document findings.

Main Success Scenario:

1. Field officer logs into the app and goes to the visit log section.
2. Field officer describes observations and recommends next steps.
3. System links the log entry to the appropriate land profile.
4. Log entry is saved and becomes part of the overall record.

Postcondition: Field officer's visit notes are recorded accurately and linked correctly.

Trace to FR Id: FR-04

FR-05 - Administrator Monitoring Tools

Primary Actor: Administrator

Stakeholders: All users

Preconditions: Administrator has logged into the admin panel.

Main Success Scenario:

1. Administrator navigates to the monitoring tool section.
2. Administrator views summary statistics on advisory usage, crop outcomes, and unresolved support tickets.
3. Administrator uses interactive dashboards to analyze trends and make informed decisions.

Postcondition: Administrator gains valuable insights into system performance and user engagement.
